

Package	Issue Summary
OFS	File & Serve will no longer fail to load states and other regions due to a race condition when loading envelope or case information.
OFS	File & Serve will no longer return a CMS unavailable message when loading a case with an incomplete or invalid address from a third party CMS. Instead, the address will be ignored and the party loaded without it.
OFS	File & Serve will now allow the entry of multiple administrative service copy email addresses in a comma-delimited format.
OFS	File & Serve will now check for and delete fee instance entries for an envelope upon submission for filings that have been deleted from the envelope while it was in a draft state.
OFS	File & Serve will now display updated labels for a variety of service fees in order to comply with payment processor requirements.
OFS	File & Serve will now filter out cases from the search results when searching by party name if that party's name is protected.
OFS	File & Serve will now include a working link to the document download page for the Administrative Service Copy URL token for filings that include multiple documents.
OFS	File & Serve will now perform additional validation on the country and region fields when those fields are changed.
OFS	File & Serve will now properly send notifications when the Lead Document is of an unsupported file type.
